

Kitchen & Bath

**K&B**

a Puricelli collection

## **Puricelli Group**

Puricelli was established in 1948 by Luigi Puricelli, who understood the development potential of plastic laminates and founded an empire over it. Today, Puricelli is one of the world leading businesses in the field of plastic laminates and decorative surfaces, boasting a corporate structure made up of five production sites, from the headquarters in Costa Masnaga (Lecco) to its branches in Italy, Greece, Spain and Tunisia. A multinational company, yet true to its Italian heart and core.

Proof of the company's inclination to operate at international level, is its organization as well as its widespread marketing services, through which the company can reach any market, taking up new challenges and seizing new opportunities in all those fields based on high technology standards and reliability.

The company's technical laboratories are on the front line in technology development, with an R&D center constantly devoted to innovation in any fields of application, thus enabling Puricelli to timely and efficiently meet any customers need.

## Kitchen & Bathroom Collection

### *When a product becomes design*

Puricelli Group showcases its kitchen and bath collection, a new array of ready-to-buy products that will certainly meet any needs in the creation of worktops and furniture, as they are highly resistant, water and heat proof, anti-bacterial and easy to clean. Aesthetics and functionality merge into a unique offer born from the Group's 70-year experience in the production of High-Pressure Laminates (HPLs) and the study of new trends, to always conceive original pieces. Finishes, colors and textures are carefully selected

and combined to fully enhance their design and technical features and make the most of them within a modern and eclectic collection. The K&B collection is available in 12mm-compact HPLs, and - thanks to the wide range of colors to choose from to match the surface - it is extremely suitable for tops and structural elements. Possible add-ons to the whole set, then, are the 4mm-compact HPL for wall coverings (behind sinks, etc.), the 0.7mm-laminate for doors and shutters and, upon request, ABS edges.

## Puri-System TOP Collection

### *Puricompat & Purilam*

PURICOMPACT bilaminates find their best application in demanding and trying environments, such as kitchens and bathrooms. Antistatic, anti-dust and highly resistant to scraping, stains, boiling water and steam, this product is just perfect for worktops, furniture and shutters. Its solidity and resistance enhance the lines of every design thanks to the extraordinary aesthetic features of the Puricompat, which are further enriched by a wide array of colors and thicknesses.

The K&B collection is made up of different compacts according to the color of the bodies matching the decorative features to get a stronger material effect and a more balanced design.

PURILAM is a single-sided laminate that can be used to produce support panels and finds its best application in environments that need specific sanitary and hygienic measures as well as resistance to mechanical stresses and scraping. Thanks to its long-lasting antistatic and anti-dust qualities, Purilam is indeed a great choice for kitchens and bathrooms.

## Morematt System Collection

### Morematt<sup>HR</sup>

#### *Ultra-matte & anti-fingerprint High Resistance (HR)*

The MOREMATT HR brand identifies laminates made by PURICELLI with state-of-the-art technologies.

Its surface is characterized by nanometric micro “ripples” that make it more resistant than any other competing products on the market.

The HPL MOREMATT HR laminate is extremely innovative in terms of performance and easy to clean. Its aesthetic performance determines the core feature of this product – a soft-touch, anti-fingerprint material with an incredibly low reflectance level.

### Morematt<sup>G</sup>

#### *Ultra-matte & anti-fingerprint Ghost (G)*

The GHOST version of the HPL MOREMATT is suitable for an even wider range of applications and for a virtually infinite offer in terms of decorative options, which recall natural effects of marbles and ultra-matte surfaces. MOREMATT G stands out among traditional decorative materials for the tactile sensation it offers, thanks to its smooth and silky surface.

The ability to self-regenerate, then, gets paramount when it comes to micro scratches than can be easily removed with a common melamine sponge.

## K&B Panels

Large in size, easy to handle and move

A strong point of the K&B collection is the extra-large size of the HPL COMPACT panels available for tops.

The size in 4200 x 1620, notably, comes in handy in large projects, with no need of joints. However, despite their size, all panels can be easily moved and handled, with virtually no risk of damage. This quality makes them highly competitive compared to

large panels in other more fragile materials, such as marble, ceramic, glass and mineral materials.

HPL COMPACT laminates featured in the K&B collection are easy to move and apply – an important step forward not only in design and manufacture possibilities, but also in application techniques and transportation.

4200 mm

1620 mm

## Compact Wall Collection

In order to offer a matching set of products, the K&B collection is completed by the COMPACT WALL, a 4 mm-panel for wall covering. In combination with other products from the collection, it is a great choice to cover and decorate empty spaces between pieces of furniture, cabinets and wall mirrors, such as behind the sink, as well as to give the other kitchen and bathroom walls a *boiserie* effect.

This aesthetic solution will reduce the number of grout lines thanks to the large sizes of the panels, thus creating a uniform and eye-catching surface.

COMPACT WALL panels are anti-bacterial and resistant to water, steam and difficult stains. It is easy to work with, handle and apply to walls, notably with double-sided adhesive techniques – it's no surprising, so, that it brilliantly succeeded in tests on boats, on which it is generally used.

COMPACT WALL panels, just like the other items of the K&B collection, are available in stock or, upon request, customizable with digital images.

## Edges

### The perfect accessory

In order to provide its customers with the best services and ensure a full set for its K&B collection, the Puricelli Group's offer is enriched with matching edges.

Realized in high quality ABS, these edges fully integrate and complete the collection, thanks to a perfect combination of thicknesses, colors and prints.

## Phenol free

Sustainability doesn't only mean safeguarding the environment, but also entails a respectful approach in production processes and in every single choice we make in our everyday life. Puricelli committed to implement production procedures, supplier selection and environmental impact assessments that brought in 2000 to the conscious decision to only rely on phenol-free resins and sustainable production

processes, conceiving its own eco-friendly thermosetting resins. The commitment to eliminate this hazardous raw material was taken on as a natural choice based on the will to ensure our customers that their safety is paramount at Puricelli.

On top of that, our production processes are FSC-certified, ensuring that raw materials used come from verified sources and recycled materials.

## A.BAC Technology

At the service of worktops

A.BAC is a specific solution implemented by Puricelli to reduce the risk of contact contamination. Its characteristics make A.BAC laminates ideal to produce surfaces to install in areas such as kitchens and baths, which are constantly used in our everyday life and contaminated by food and moisture. A.BAC's innovative formula is aimed at hindering bacterial growth on the surface and reducing the existing bacterial load by more than 99.9%.

Laboratory tests proved its effectiveness against Staphylococcus Aureus and Escherichia Coli, which are responsible for a great number of infections hard to treat. Surfaces made with A.BAC technology are easy to clean, offering a healthy decorative solution that can ensure stability and anti-bacterial properties throughout its whole life cycle.

## K&B Advantages

Antibacterial

Suitable for contact with food

Thermoresistant (tested at 180°C)

Resistant to humidity and steam

Resistant to impacts, scratches and abrasion

Easy to clean

Resistant to stains and corrosion

Easy to handle

Matching products

Available in large sizes

## Morematt
